INFINITY ACTUATORS

# The **3X** Factor - *BEST IN CLASS*

The GVC tradition of excellence continues with the introduction of :

## GVC DRS Series Scotch Yoke Actuators

### Three Exclusive Features

#### Modularity

- Three parts – frame, spring, and air cylinder – modifications are simple and quick!
- Welded spring modules, for complete safety
- Springs or cylinders can be removed from frame module without disassembling the frame module.
- Conversion from spring return to double acting is EASY!

#### Versatility

- Optional hydraulic override can be included or added later
- Converting from fail closed to fail open is easily done in the field.
- Extra heavy duty travel adjustment bolts offer +/- 10% adjustment; for high speed impacts, no special end stops required.

#### Reliability

- Guaranteed for 1 million cycles!
- Exclusive X-Seals on pistons and V-Seals on the shafts out perform standard O-rings.
- Yoke is supported by life time lubricated ball bearings.
- Oversized dual tie rods are internal to the cylinder to eliminate corrosion.
- Tie rods pass through the pistons through solid bearings, X-seals not conventional O-rings - better alignment, lower friction, and smoother operation.
- Yoke thrust pin is case hardened for higher output torques.

# Heavy Duty Scotch Yoke Actuators

## Actuator Modules

GVC actuator spring modules and pneumatic modules can be removed, swapped, rebuilt, or reinstalled on the frame module without disassembling the frame module. No need even to remove top cover of frame module, because all bolting for removal of the modules is external.

Actuators can easily be changed in the field from fail close to fail open by just swapping the positions of the spring and pneumatic modules. No need to dismantle the frame cover or cylinder assembly

Actuators can be modified from double acting to spring return easily in the field by adding a spring module.

Springs are lifetime lubricated and epoxy coated.

Springs are pre-compressed inside their welded spring modules for safety and ease of use.

Pneumatic cylinders are lined with hard chrome plating. Smooth to eliminate wear of piston seals, the surface is very hard, for long life.

Inside the pneumatic module, dual oversized tie rods are protected from external corrosion. Where the tie rods pass through the piston head, GVC has improved the design by providing a slide bearing, where most designs don't. This bearing is important to help maintain alignment and assure smooth operation.

## Frame Module

Inside the frame module, the yoke is supported by life time lubricated bearings. Needle roller bearings ensure the most efficient torque transmission.

Extra heavy duty travel adjustment bolts allow for +/- 10% adjustment of the 90 degree stroke. The area of contact is large, to withstand the impact forces.

The yoke thrust pin is made of case hardened steel to resist wear

The piston shaft is supported on each side of the frame module by solid bearings that ensure proper alignment and smooth operation.

## Flexijoint

Each piston shaft of the GVC DRS is equipped with two Flexijoins. These specially designed joints compensate for movement and changes in alignment to reduce internal stresses and increase output torque.

The thrust transmitted through the Flexijoins ensures no side thrust on the cylinder walls and bearings.

## Unique Sealing Features

Piston seal is GVC X design. Flexibility of the sealing material reduces friction, prevents leakage, and extends actuator life. The X shaped seal is wear compensating, and the unique shape of the seal retains the grease for longer periods. The piston is guided by a PTFE thrust bearing, which helps keep the piston centered, and seal wear to a minimum.

The tie rod seal is also of the GVC X design. Old fashioned O-rings are replaced by these flexible, low friction, resilient seals to reduce the failure rate of tie rod seals. Also reduces the wear and tear to the tie rods themselves.

GVC has also replaced the standard O-ring of the shaft seal. In this position, we provide a proven V-seal design. This self-energized, wear compensating seal guarantees low hysteresis and minimum friction. Like the X seal of the piston and tie rod seals, the inherent shape of the V-seal helps keep the grease where it needs to be.

## Optional Hydraulic Override

GVC DRS actuators may be ordered with an optional hydraulic override, or the override may be retrofitted to an existing actuator.

The override is fitted into the spring cartridge, to keep the overall dimensions of the actuator and override to a minimum.

Can withstand up to 2,000 psi hydraulic pressure.

Easy to operate.

Special Z seal ensures zero leakage and extended life.

**Conclusion :** Most actuators are perfectly good. Some are better than others...  
... but the GVC DRS is **Best In Class!**

# Heavy Duty Scotch Yoke Actuators

## FEATURES

- X seals and V seal for low wear and tear, each with grease retaining groove
- Extra heavy duty travel adjustment bolts can withstand high impact and are easy to adjust
- Needle roller bearing provides for the most efficient torque transmission
- The actuator can easily be converted to fail open from fail close, by interchanging the spring and pneumatic modules
- No need to dismantle the frame cover to install/ change spring or air module
- The spring is well caged in the cartridge form
- The pneumatic cylinders are lined with hard chrome plating - smooth to eliminate wear of piston seals for long life

### PISTON SEAL AND GUIDE

- The piston is guided by PTFE thrust bearing, to ensure no metal to metal contact
- The seal is X shape with flexibility, to minimize the friction
- The seal flexibility ensures no leakage and very long life
- Due to inherent shape, it retains the grease for a longer period
- Guaranteed operation of 1 million cycles

### YOKE PIN THRUST BEARING

- The carrier is well guided on the support rod
- Case hardened steel of the yoke thrust pin is strong for consistent transmission of the force
- Grease nipple for lubrication
- Larger intervals between scheduled maintenance

### FLEXI JOINT

- The thrust transmitted through the Flexi joint ensures no side thrust on the cylinder walls and the bearings
- The Flexi joint provides an easy means to assemble/ dismantle the cylinder module to the frame
- In spring return actuators, dual Flexi joints allow the carrier to operate perfectly and smoothly

# Heavy Duty Scotch Yoke Actuators

- Solid bearing for piston rod for better alignment and smooth operation
- Internally mounted hydraulic override
- Guided, lifetime lubricated epoxy coated springs
- The tie rods are enclosed in the cylinder for the best performance, for high corrosion protection, and a longer life of the actuator
- The hydraulic override is built into the spring carrier
- Can be installed at a later date
- The vent valve is provided to check the gland leak on the direct mount valves
- The vent valve has built non return function, for IP67
- Secondary vent valve function is to detect leakages in the rod seal area of pneumatic cylinder

## SUPER EFFICIENT!

Needle bearings, Flexi joint, and the hardened yoke thrust pin bearing, are all incorporated into the actuator for longer, smoother operation. The GVC DRS actuator gives you greater efficiency and higher torque output, with less maintenance.

*Superior design with lower costs!*

**HEAVY DUTY BEARINGS**

- The piston rod is guided on the heavy duty bearing
- V - Seal at the rod end ensures a very long life
- The bearing is built with a high grade bronze metal
- Low friction for smooth operation

**YOKE BEARING**

- The yoke is supported on life time lubricated ball bearings
- Very low coefficient of friction
- Provides 98% of the torque transmission
- Wear and tear of the yoke is reduced due to the alignment and support provided by the bearings

**X SEAL ON TIE ROD**

- The X seal provides the flexibility in sealing
- Due to additional linear bearings, the tie rod is not under wear and tear
- The X seal provides extremely low friction and a long life

# Heavy Duty Scotch Yoke Actuators

## SCOTCH YOKE

- Conventional system
- Excellent for valves having break torque much higher than run torques
- Comparatively, less cyclic load
- Light weight
- Requires only periodic servicing
- Cost effective

## LOW FRICTION PISTON SEAL

Flexible X style seal seals the piston to the cylinder wall. Hard chrome plated cylinder ensures a smooth surface for the piston seal to glide along. Chrome will resist flaking or peeling, ensuring a long lasting smooth surface

LOW FRICTION LIP SEAL

## PRINCIPLE OF SCOTCH YOKE

MAKE 'B'

MAKE 'R'

GVC

- The roller is directly mounted on pin
- High friction
- Low efficiency of transmission
- Line contact for load transmission

- Square drive is mounted on pin
- Larger friction
- Lower efficiency of transmission
- Larger face contact for load transmission

- Roller is mounted on a needle roller bearing
- Very low friction
- Very high efficiency of transmission
- Line contact for the load transmission

# Heavy Duty Scotch Yoke Actuators

## EFFICIENCY OF SCOTCH YOKE ACTUATORS

THE SCOTCH YOKE ACTUATOR IS A LINK MECHANISM ON A SWEEP OF 90°

- (A) Due to the Scotch Yoke construction, the torque across the stroke is not constant.
- (B) Due to the construction at each point of rotation the torque varies, this is due to the fact that at each degree, the perpendicular distance to the force is changing.

Hence force multiplied by perpendicular distance, gives us the torque.

By neglecting frictional force we get:

$$\text{Torque} = \frac{F C}{\cos^2 \theta}$$

This is a frictionless mechanism, but conventionally, a factor for friction must be included in our equation. This friction, varies with the angular position.

## DRS EFFICIENCY

- Due to the needle roller on the load carrying pin
- Due to the ball bearing yoke
- Loss on 90° and 0° is only 2%

Hence 98% of the torque is available for work. Only 2% of the force is lost to friction - this makes GVC actuators much more efficient than those of our competitor

MAKE	% Loss at 0° and 90°
GVC	2%
MAKE B	6%
MAKE R	7%

C	350	HY080				E3	
D	400	HY0100				E4	
E	500	HY0125					
G	600	HY0160					
H	700	HY0200					
J	800	HY0250					
M	900	HY0300					
	1000				g		h
	1100						
	1200						
	1300						
* : Default				NIL	*	SPECIAL VERSION	
CCW : Counter Clockwise fail close				HYDRAULIC	MIBH	CYLINDER BORE ENPLATED	
CW : Clockwise fail open				OVERRIDE		SIDE HAND WHEEL OVERRIDE	
						SUBSEA TO 30M	
						SPECIAL INSTRUCTION	

## ORDERING EXAMPLE

- DRSE0700E4  
Frame size E, Cylinder bore 700 mm Spring Return with Spring set 4, fail close with NBR seals
  - DRSC0400-HN  
Frame size C, Cylinder bore 400 mm Double Acting with HNBR seals

#### MIBH ORDERING CODE

Ordering code for manual override needs complete DRS code since the manual override can be installed at a later stage, hence MIBH needs to be specific for each model  
e.g. MIBH for DRS E700E4 would be MIBH-DRSE700E4

CCW

This is the standard version for fail close, or air to open/ spring to close. Looking from the top of the yoke (i.e. Where limitswitch mounts), the drive will rotate counter clockwise (ccw) when air is applied to the actuator when air is vented, springs will rotate drive clockwise to close valve

CW

This is the version for fail open. Looking from the top of the yoke, the drive will rotate clockwise when air is apply to the actuatorWhen the air is vented, springs will rotate the drive counter clockwise to open the valve

MOPD

The torque chart indicates the MOPD. (Maximum operating pressure differential) It is very critical not to exceed the MOPD

DUAL CYLINDER OPTION (-2)

This option designates that twin pneumatic cylinders are installed on the frame. For double acting twin cylinder style, one pneumatic cylinder is mounted on each side of frame. For the spring return twin cylinder style, two pneumatic cylinders are mounted in tandem on the pneumatic side of the frame.

SEALS

NBR -4° F to 175° F, Eton -4° F to +250° EPDM -25° F to +200° Fluoro Silicon -45° F to + 200° F, HNBR -50° F to 170° F

## HYDRAULIC CYLINDER

DRS actuator are also supplied with hydraulic cylinder The Torque chart for double acting and Single acting is referred same as pneumatic to choose right size of Hydraulic Cylinder

- Choose DRS with pneumatic model with maximum air pressure possible as shown in chart
  - Last three digit shows bore of the cylinder in mm.
  - Select Hydraulic pressure in bar
  - With above data calculate nearest Hydraulic actuator bore  
eg. DRSD0600, maximum pressure allowable is 4 bar (No torque details beyond 4 bar is shown) if Hydraulic pressure is 100 bar the calculated Hydraulic bore will be 120 mm choose Hy0125. Selected model will be DRSDHY0125
